

# The Impact of Immigration on Criminality and Economic Growth in Host Countries

Mirko Yonathan Ciotta

23.09.24

## 1. Project Overview

- **Objective:** To analyze the relationship between different types of immigration and their effects on criminality and economic growth in selected host countries.
- **Scope:** This project will cover immigration types from Europe, Arab countries, and other regions, focusing on crime rates and GDP growth.

## 2. Research Questions

- What is the correlation between immigration and crime rates?
- How do immigrants impact economic growth and public services?
- How do political narratives shape public perception of immigration?

## 3. Data Collection

- **Crime Statistics:** Gather crime rate data from:
  - FBI Uniform Crime Reporting (UCR)
  - National statistics agencies (e.g., UK Office for National Statistics)
- **Immigration Data:** Collect immigration statistics from:
  - OECD Migration Database
  - Eurostat
  - UNHCR
- **Economic Indicators:** Obtain economic data from:
  - World Bank
  - International Monetary Fund (IMF)

## 4. Data Analysis

- **Correlation Analysis:**
  - Use statistical methods (Excel, R, Python) to determine the relationship between immigration levels and crime rates.
- **Comparative Analysis:**
  - Analyze different countries or regions to identify patterns in immigration and crime.
- **Impact Assessment:**
  - Evaluate the economic contributions of immigrants by examining employment rates and entrepreneurship.

## 5. Literature Review

- Review existing studies on immigration and crime, focusing on:
  - Pew Research Center findings.
  - Reports from the National Academies of Sciences.

- Summarize key theories (e.g., Social Disorganization Theory, Strain Theory) and their relevance.

## **6. Political Narrative Analysis**

- Conduct a media analysis to explore how immigration is portrayed in the news.
- Analyze public opinion surveys to understand perceptions of immigrants and their societal impact.

## **7. Conclusion**

- Summarize findings regarding the correlation between immigration and crime rates.
- Discuss the positive economic impacts of immigrants.
- Highlight how political narratives may distort public perception.

## **8. Recommendations**

- Advocate for data-driven discussions about immigration.
- Recommend policies that support immigrant integration and leverage their economic contributions.

## **9. Timeline**

- Develop a timeline for each phase of the project, including:
  - Data collection duration.
  - Analysis period.
  - Writing and presentation preparation.

**Objective:**

The primary objective of this project is to analyze the relationship between immigration levels and crime rates, as well as to assess the economic impact of immigrants on host societies. By examining real data and relevant studies, the project aims to provide a clearer understanding of whether immigrants contribute positively or negatively to society.

**Scope:**

This project will focus on:

- Different types of immigration, including economic migrants, refugees, and family reunification.
- The correlation between immigration levels from various regions (e.g., Europe, Arab countries, others) and crime rates in host countries.
- The economic contributions of immigrants, including job creation, entrepreneurship, and overall economic growth.
- The influence of political narratives and public perception on the discourse surrounding immigration.

**Importance of the Study:**

Understanding the impact of immigration on crime and economic growth is crucial for:

- Informing policymakers and stakeholders about the realities of immigration.
- Challenging common misconceptions fueled by political rhetoric.
- Promoting social cohesion and integration within communities.
